

Sprint meeting 12

Meeting date: 26th march 2026

Supervisor: Haoyi Wang

Meeting time : 25 minutes

Progress:

- Added settings
- In settings added colour blind modes and music controls to allow for accessibility
- Added water generation and logic for placement
- Added greenery around the map on generation of the map
- Added placement of greenery
- Fixed some bugs
- Made adjustment to UI
- Made Building info show on building hover
- Fixed bus size issue
- Added handling for deleting routes and route viewer (both bus and train)
- Updated route viewer UI
- Added new NPC sprites with walk animations
- Added more building sprites
- Added nature based buildings

Suggestions/observations/discussions/questions from/with supervisor

- Poster was discussed, Supervisor commented that the poster is overall complete other than adding an email address and updating the game screenshots. The core content is fine
- I asked about using an asset and modifying it to ensure this was allowed
- Discussion on what to do next, user testing and report writing as well as winding down production was spoken about

Going forward

- Report will be started
- User testing will be done
- No more major features will be added, instead the current features will have loose ends tied up enough to the point the game can be tested

- When user testing is done adjustments will be made
- Things to do before user testing :
 - Decide on presentation for time
 - Add code for NPCs reaction to nature
 - Add proper handling for new water tiles
 - add more ratings for water and natures
 - Fix key bugs (building hover issue, NPC navigation)
 - Make NPC sprites get hidden when they get on the bus
 - Add sound effects
 - Add more feedback for user actions
- Potential future code if time allows
 - Add water based features like bridges
 - Add directional sprites for trains
 - Depending on feedback, add tutorial
